DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-22, drawn to a process for processing electric components, classified in

class 438, subclass 974.

II. Claims 23-38, drawn to an apparatus for processing the components, classified in

Inventions Group I and Group II are related as process of making and product made. The

class 257, subclass 618.

The inventions are distinct, each from the other because of the following reasons:

inventions are distinct if either or both of the following can be shown: (1) that the process as

claimed can be used to make other and materially different product or (2) that the product as

claimed can be made by another and materially different process (MPEP § 806.05(f)). In the

instant case, the product as claimed can be made by another and materially different process,

such that instead of separating one section of the first carrier material and placing this section on

a component, it would be possible to placing the first section on a component and then separating

it.

Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, restriction for examination

purposes as indicated is proper.
